

Infrared Inspection

Our inspectors use infrared cameras on every home inspection to detect water leaks, electrical problems, and energy loss issues.

A picture is worth a thousand words.

The Power of Infrared

WHY INFRARED?

Because the human eye can't measure temperature differences. Infrared finds issues that otherwise can't be detected visually.

WHAT OUR INSPECTORS FIND

Our inspectors use infrared to detect plumbing leaks, roof leaks, exterior water intrusion, overloaded circuits, and insulation issues.

WHY OUR INSPECTORS ARE SPECIAL

Our inspectors are Certified Real Estate Thermographers. Each of our inspectors undergoes rigorous classroom and field training conducted by a Level II Certified Thermographer.

WHY AGENTS RECOMMEND INFRARED

Infrared replaces fear of the unknown, instills buyer confidence, saves time on revisits, prevents false positives, and shows buyers you have their best interests at heart.

Included with every home inspection, free of charge.
